**SpaMist® Wood Grain**

**Ultrasonic Mister & Diffuser**

Assembly & Operating Instructions

Please read these instructions carefully before assembling and/or operating. Keep for future reference.

**Features and Functions:**
Based on the nature of aromatherapy, a gentle mist is produced by ultrasonic vibrations. The mister displays a color-cycling sequence of light, creating a soothing atmosphere. Adding essential oil further expands the unit’s appeal, emitting a fragrant aroma. The unit will run up to 4 hours continuously. If the water level becomes too low, the unit will shut off automatically to prevent damage.

**Assembly and Operating Instructions:**

1. **Plugin the Adapter into the mister Base.** (Fig 1)

2. **Fill the mister with tap water to just below the red cap (inside Base),** equal to 1/2 cup of tap water. **DO NOT USE DISTILLED WATER.** Do not fill to the top. (Fig 2)

3. **Place Dome Top onto the top of the Base.** (Fig 3)

4. **Rotate the Directional Mist Adjuster to direct mist.** (Fig 4)

5. **Plug the Adapter into the wall outlet.**
   - Press button **ONCE** to turn on mist and rotating lights.
   - Press button **TWICE** to freeze lights.
   - Press button **THREE TIMES** to turn lights off.
   - Press button **FOUR TIMES** to turn unit off.
   The unit will automatically shut off when the water level is too low. Refill with tap water as needed for unit to operate. It is normal for temperature of the water and adapter to increase while in operation.

6. **Unplug unit when not in use.**

**Troubleshooting:**

**NOTHING HAPPENS WHEN YOU PLUG IN THE MISTER.** Check the connection and the power source. The water level must be below the red cap. Ensure that the unit is turned on by cycling through the 4 button push options.

**THERE IS NO MISTING.** Check the water level. Unit shuts off automatically when the water is low. Any accumulated buildup on the misting disk will diminish the amount of mist produced. Follow cleaning directions.

**Aromatherapy:**
Place a few drops of 100% pure essential oil directly into the water. Rinse unit (see below) once a week to avoid buildup.

**Care & Maintenance:**
1. Replace water and clean frequently. **NOTE:** Only use tap water.
2. Unplug the unit while making any adjustments.
3. Any accumulated buildup on the misting disk will diminish the amount of mist produced.
4. Clean unit weekly. To clean, unplug the base from the power source. Rinse base with hot tap water at least three times to ensure buildup is removed. Allow unit to dry thoroughly.

5. SpaRoom® KLENZOR™ tablets may be used to renew diffuser to like-new condition.

**WARNING:**
Do not operate without water.
All electrical appliances should be kept out of reach of children and pets.
**NOTE:** You may see a flash inside the unit when you initially plug it in. This is the LED light inside: not a spark or malfunction.
